Experience

Staff Developer – Full Stack

January 2024 — Present

Lights On Software (Software Agency)

Toronto, Canada (Hybrid)

Work on projects for clients long term, providing full stack skills, input on architecture decisions, and knowhow on development.

- Maintain a good relationship with clients, with always positive feedback.
- Deliver new features and bug fixes swiftly.

Clients

Saris AI (AI FinTech) — **January 2026 — Present**

Work creating automation tools for financial institutions to improve backoffice speed.

- Delivered a new feature in the second week of work.

Tenstorrent (AI Hardware Manufacturer) — **January 2024 — January 2026**

Worked on data visualization tools for analyzing large performance datasets.

- Improved performance of data heavy react app from 1 minute to under 3 seconds.
- Implemented UI and logic for loading app data via SSH.
- Forked a Google project and added features to it while maintaining more than 95% compatibility.
- Implemented data analysis app with "human in the loop" model for quick feedback on data changes.

Senior Backend Developer — **March 2021 — December 2023**

Moka/Mogo (Stock trading application) — **Toronto, Canada (Remote)**

Responsible for writing backend code, communicate with the finance team, and bridge communications between teams in Canada and Europe.

- Improved delivery time of the project by acting as Scrum Master and managing tasks for the team.
- Responsible for improving the core product backend and improving experience for users across Canada and Europe.
- Reduced costs with third-party services by refactoring part of the application and removing redundant calls to external services.
- Improved delivery time by acting as a scrum master, where I improved visibility on project status and current bugs.
- Facilitated knowledge sharing between team members and worked as an onboarding partner for three new team members.
- Built and deployed new services and APIs using Docker and Node.js.
- Implemented AWS lambdas to process a pipeline to buy and sell on the stock market.
- Worked on integration with third party provides, including Braze and Contentful, to provide backend proxies to those providers.

Senior Full Stack Developer

October 2020 —

Drag App (Gmail integration app)

UK (Remote)

Responsible for improving the application code and implementing new features.

- Improved applciation load times, making the user experience smoother.
- Refactored and consolidated multiple components to share code, improving code maintainability and design consistency.
- Refactored the codebase to remove old dependencies, improving reliability and moving code closer to standards.

Volunteering

Dev Community Volunteer

November 2022 — September 2025

Toronto Javascript

Organized and hosted events for the community.

- Presented in 4 talks at "Teck Talk" events.
- Hosted "Code Club" event focused on mob programming and pair coding.
- Worked as project manager for a volunteer management system, managing goals and a team of 10 developers while providing feedback and mentoring to the junior developers on the team.

Education

Post-Graduation Agile Methodologies

January 2020 — January 2021

Unicesumar

Brazil

- Wrote a case study of the results of implementing scrum on the team I was working with at the time.

B.Sc. Computer Science

January 2016 — January 2019

Universidade de Cuiabá

Brazil

- Worked in academic research on usability, accessibility, and user experience.
- Published 3 research papers.
