Experience

Staff Developer – Full Stack
Lights On Software (Software Agency)

January 2024 — June 2026
Toronto, Canada (Hybrid)

Worked on projects for clients long term, providing full stack skills, input on architecture decisions, and knowhow on development.

- ◆ Maintain a good relationship with clients, with always positive feedback.
- ◆ Deliver new features and bug fixes swiftly.

Clients

Saris AI (AI FinTech)

January 2026 — April 2026

Worked creating AI based automation tools for financial institutions to improve backoffice speed.

- ◆ Delivered a new feature in the second week of work.
- ◆ Integrated LLM calls into new workflows for data analysis.
- ◆ Built integration with two third party service APIs.
- ◆ Improved accuracy on data analysis for an existing workflow.

Tenstorrent (AI Hardware Manufacturer)

January 2024 — January 2026

Worked on data visualization tools for analyzing large performance datasets.

- ◆ Improved performance of data heavy react app from 1 minute to under 3 seconds.
- ◆ Implemented UI and logic for loading app data via SSH.
- ◆ Forked a Google project and added features to it while maintaining more than 95% compatibility.
- ◆ Implemented data analysis app with "human in the loop" model for quick feedback on data changes.

Senior Backend Developer

March 2021 — December 2023

Moka/Mogo (Stock trading application)

Toronto, Canada (Remote)

Responsible for writing backend code, communicate with the finance team, and bridge communications between teams in Canada and Europe.

- ◆ Improved delivery time of the project by acting as Scrum Master and managing tasks for the team.
- ◆ Responsible for improving the core product backend and improving experience for users across Canada and Europe.
- ◆ Reduced costs with third-party services by refactoring part of the application and removing redundant calls to external services.
- ◆ Improved delivery time by acting as a scrum master, where I improved visibility on project status and current bugs.
- ◆ Facilitated knowledge sharing between team members and worked as an onboarding partner for three new team members.
- ◆ Built and deployed new services and APIs using Docker and Node.js.
- ◆ Implemented AWS lambdas to process a pipeline to buy and sell on the stock market.
- ◆ Worked on integration with third party provides, including Braze and Contentful, to provide backend proxies to those providers.

Senior Full Stack Developer

October 2020 — March 2021

Drag App (Gmail integration app)

UK (Remote)

Responsible for improving the application code and implementing new features.

- ◆ Improved application load times, making the user experience smoother.
- ◆ Refactored and consolidated multiple components to share code, improving code maintainability and design consistency.
- ◆ Refactored the codebase to remove old dependencies, improving reliability and moving code closer to standards.

Education

Post-Graduation in Agile Methodologies

Unicesumar

- ◆ Wrote a case study of the results of implementing scrum on the team I was working with at the time.

B.Sc. in Computer Science

Universidade de Cuiabá

- ◆ Worked in academic research on usability, accessibility, and user experience.
- ◆ Published 3 research papers in Human-Computer Interaction (HCI).

Volunteering

Dev Community Volunteer

November 2022 — September 2025

Toronto Javascript

Organized and hosted events for the community.

- ◆ Presented in 4 talks at "Teck Talk" events.
- ◆ Hosted "Code Club" event focused on mob programming and pair coding for 2 years.
- ◆ Worked as project manager for a volunteer management system, managing goals and a team of 10 developers while providing feedback and mentoring to the junior developers on the team.
